Research Experience

Machine Learning Research Assistant

Aug 2025 – Apr 2026

Driving Fatigue Detection

- Engineered an automated facial analysis pipeline to generate standardized annotations for supervised learning
- Independently led a T-ITS publication on EEG-based driving fatigue detection, covering the entire lifecycle: dataset curation, model architecture/hyperparameter design, experimentation, and manuscript authorship (methodology, results, conclusion).
- Produced all figures, tables, and technical diagrams to ensure reproducibility.

Large Language Model Research Assistant

Aug 2025 – Feb 2026

LLM Explainability and Reasoning

- Implemented SFT pipelines across multiple open-source LLMs (Qwen, Gemma, Llama, etc.) and developed targeted steering/intervention mechanisms to constrain model behavior and improve reasoning consistency.
- Curated large-scale open datasets and designed a label generation pipeline to enable reproducible training with rigorous benchmarking.
- Enhanced manuscript quality through technical reviews and narrative restructuring to improve clarity, accessibility, and publication readiness.
